

START HERE

Install IPTV Smarters Pro

A step-by-step XtremeStreams guide for Android phones, tablets, Android TV, Google TV and compatible Fire OS devices. Install the player first, then add your streaming service login.

Have these ready

Your device connected to the internet, enough free storage, and the streaming username, password and server URL from your activation message. Your customer portal password may be different.

Your device	Follow this path
Fire TV or Firestick with Fire OS	Prepare on page 2 → download on page 3 → install on page 4 → sign in on page 6
Android TV or Google TV	Start on page 3 → install on page 4 → sign in on page 6
Android phone or tablet	Install on page 5 → sign in on page 6

Check your device before downloading

The supplied IPTV Smarters Pro 5.0 APK requires Android 5.0 or later. Check the Downloads card for the current version and requirements.

For Fire TV, check Settings → My Fire TV → About. Continue with the Fire TV steps only if the device uses Fire OS and permits APK installation. Vega OS devices use a different app format and cannot install this Android APK.

[Open XtremeStreams Downloads](#)

[Open Member Login for service details or support](#)

Using an iPhone iPad or Apple TV

Use [Smarters Player Lite](#) on [Apple's App Store](#). Apple devices use a separate installation process; this APK guide is for Android.

Screenshots are genuine reference images published by AFTVnews and Samsung. They show example devices and earlier software layouts. Menu names and appearance can vary. This guide does not include captures of your exact device or your installed Smarters 5.0 interface.

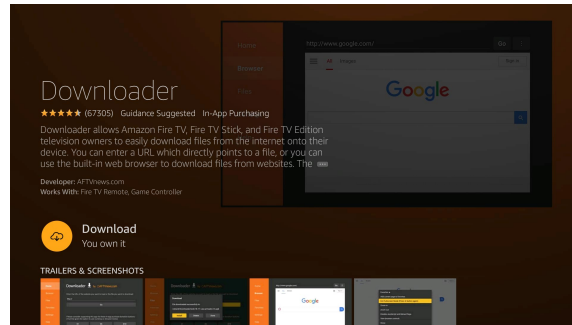

FIRE OS DEVICES

Prepare your Fire TV or Firestick

Use the remote's directional buttons to move and the center Select button to choose an item. Complete these three steps, then continue on page 3.

1. Install Downloader

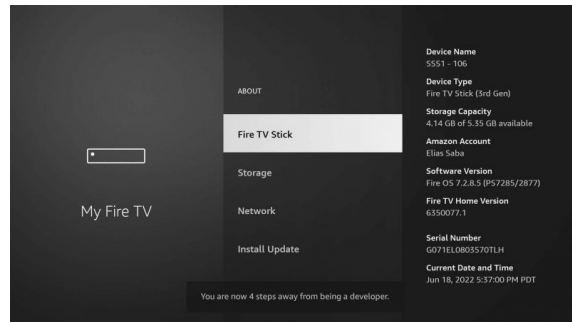

From the Fire TV home screen, open Find or Search. Search for Downloader, choose the app by AFTVnews, and select Get or Download.

Amazon Appstore example showing the original Downloader app. Source: AFTVnews.

2. Reveal Developer Options if needed

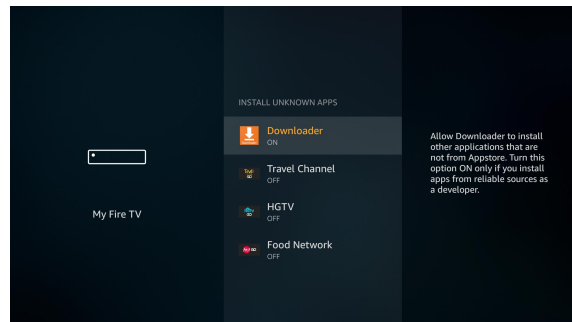

Open Settings → My Fire TV → About. Highlight your device name and press Select 7 times. Press Back to return to My Fire TV. On some Fire TV televisions, this menu is called Device & Software.

About screen example. Select the highlighted device name repeatedly. Source: AFTVnews.

3. Allow Downloader to install apps

Open Developer Options → Install Unknown Apps. Select Downloader and set it to ON. Older Fire OS versions may show Apps from Unknown Sources instead.

Install Unknown Apps example showing Downloader ON. Source: AFTVnews.

Next: open Downloader and follow Download the APK on your TV on page 3. ADB debugging is not needed for this Downloader method.

ANDROID TV GOOGLE TV AND FIRE OS

Download the APK on your TV

Fire TV users can start at step 2 below after preparing their device. Android TV and Google TV users start at step 1.

1. Android TV and Google TV preparation

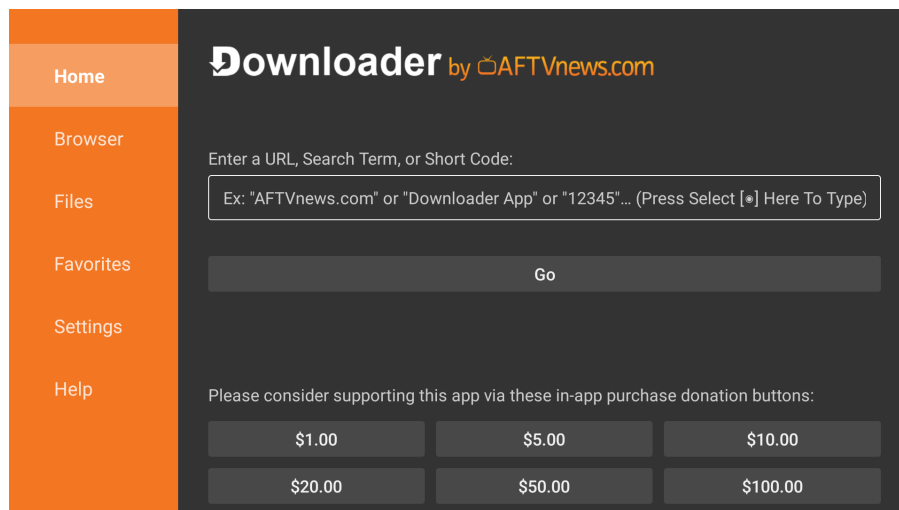

Open the TV's Google Play Store and install Downloader by AFTVnews. If Downloader is unavailable for your device, ask support for a compatible file-transfer method.

2. Get your direct APK download link

Use the direct IPTV Smarters APK link supplied by XtremeStreams support or your activation instructions. If you do not have a direct link, request one through [Member Login](#) before continuing.

3. Enter the link in Downloader

Open Downloader. On its Home screen, select the URL field, enter the complete link exactly as provided, then select Go. Wait for the download to finish.

Downloader Home screen. Enter your supplied APK link in the URL field above Go. The example image intentionally has an empty field. Source: AFTVnews.

A direct file link works best on TV

The XtremeStreams Downloads page is intended for compatible web browsers. If Downloader opens a page but cannot save the APK, ask support for a direct file link instead. Do not download the separate .bin file parts shown in a file listing.

A TV download link should deliver one complete APK. Do not use a payment link, a customer portal page, or the Apple App Store link in Downloader.

ANDROID TV GOOGLE TV AND FIRE OS

Install and open the player on TV

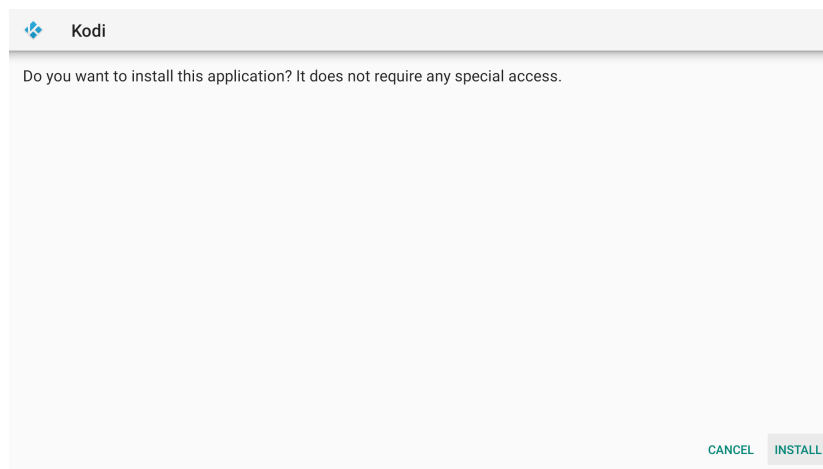

Continue after the complete APK has downloaded. Follow the system installer shown on your own device.

4. Allow this installer if prompted

If the TV blocks installation, choose Settings in the prompt and allow Downloader to install apps. Return to Downloader and open the downloaded APK again. Android TV menu names vary; look for Install unknown apps or Unknown sources.

5. Check the app name and install

Confirm the installer identifies IPTV Smarters Pro. Select Install and wait for confirmation. If no installer appears automatically, open Downloader's Files section and select the completed Smarters APK.

Generic Fire OS installer reference. This published example shows Kodi, not Smarters. Your own installer must identify IPTV Smarters Pro. Source: AFTVnews.

6. Open IPTV Smarters Pro

Select Open after installation, or launch the app from your device's apps list. On Fire TV, another route is Settings → Applications → Manage Installed Applications → IPTV Smarters Pro → Launch application.

After confirming the app works, you may remove the downloaded APK file from Downloader to free storage. Keep the installed app. You can also turn off Downloader's installation permission until an update is needed.

Next: add your streaming login on page 6. Installing the player does not activate or renew a subscription.

ANDROID PHONE AND TABLET

Install on an Android phone or tablet

Use your phone or tablet's browser and file manager. Screens below show a Samsung example; other brands may use different menu labels.

1. Choose the Smarters APK

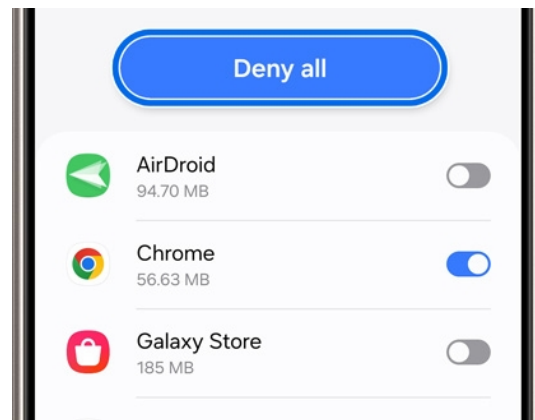

Open xtremestreams.com/downloads/. Find IPTV Smarters Pro and tap Download APK. Wait for the complete download.

2. Open the downloaded file

Open your browser's Downloads or your device's Files / My Files → Downloads. Tap the Smarters file ending in .apk.

3. Allow the app opening the APK

If prompted, tap Settings, then enable Allow from this source for the browser or file manager you used. You can also search Settings for Install unknown apps. Allow only the needed source.

Samsung reference showing permission by source app. Use Chrome or My Files only if that is how you opened your APK; you do not need to enable every source. Source: Samsung.

4. Install the application

Return to the APK and tap Install. Confirm that the installer identifies IPTV Smarters Pro.

5. Open and add your service

Tap Open and follow page 6. After installation, you can turn off the browser or file manager's installation permission.

If Android blocks installation

Keep Play Protect enabled. If the device reports a harmful app, an incompatible package, or a security restriction, stop and contact support with the exact message rather than repeatedly bypassing the warning.

ALL ANDROID DEVICES

Add your XtremeStreams service

Use the streaming service details supplied in your activation message. Your website account login and your streaming player login may be different.

1. Choose the right device layout

Open IPTV Smarters Pro. If prompted for a device type, choose TV for a television or Mobile for a phone or tablet. Review any first-run terms shown by the app.

2. Choose your login method

If your activation message provides a username, password and server URL, select the Xstream Codes / Xstream Codes API login option. If you were supplied an M3U playlist instead, choose the matching playlist option. Button names can vary.

Field in the player	What to enter
Any Name or Profile Name	XtremeStreams, or another name you recognize
Username	The streaming username from your activation message
Password	The streaming password from your activation message
Server URL or Portal URL	The exact service URL, including http/https and any port, as supplied

3. Save the profile and load your lineup

Select the app's Add User, Login or Save action. Let channels and other available categories load. Open a channel or title to check playback.

If you need help

See the troubleshooting table on page 7, or open [Member Login](#) and submit a support ticket. Include your device model and the exact error message.

REFERENCE

Troubleshooting and screenshot sources

Use the checks below if installation or sign-in stops. Screenshots show real reference devices; your exact device layout and Smarters interface may differ.

What you see	What to do
Download page or APK link unavailable	Ask support for a current direct APK link.
App not installed or a signature conflict	Check storage and device requirements. Contact support before uninstalling an existing player; settings may be lost.
Invalid login or no lineup	Check the exact streaming credentials and service URL. Confirm your subscription is active.
Security block or installation option missing	Share the device model, operating system and exact message with support.

Open Member Login and submit a support ticket

Include your device model, operating system, app version and exact error. If sending a screenshot, hide passwords and private account details.
